Introduction

VistA-Office EHR (VOE) is based upon the Veteran's Administration VistA, which can be obtained through a Freedom Of Information Act (FOIA) request. VOE is being developed and tailored to be an outpatient system. Throughout this document, the assumption is made that if VistA does it, VOE will do it, with certain exceptions that are identified in the comments column. The VA, working collaboratively with CMS and its contractors, identified the base functionality already available in VistA. Therefore, this requirements document identifies for the reader what will be available in VOE version 1.0, to be publicly available on or around August 1, 2005. The functionality identified below is a combined list of what is already available in the FOIA VistA version plus what is being added for the VistA-Office version. The project assumes that if the VA provides functionality via Vista, then VOE will have that functionality – with the known exceptions indicated in the comments column.

VistA, and therefore VOE, has many capabilities for meeting additional requirements via templates, VistA imaging, ad hoc FileMan reports, etc.; however, these capabilities are often site specific and/or require extra set up. When possible, clear documentation regarding set-up and site configuration will be included with the VOE documentation to clearly explain all possible and suggested uses of existing VistA functionality to support clinical needs.

The initial goal of VOE version 1.0 is to provide a comprehensive electronic health record to small physician offices at a low cost that includes reporting of quality measures. During the development and testing of VOE, users will define additional requirements. These will be tracked via a change control process and will be evaluated for future versions of VOE. A change control board will be used to determine future modifications, based on available funding and resources constraints. Requests for additional functionality should be submitted to VistA@ifmc.org.
